

# Elusive Presence Writeup

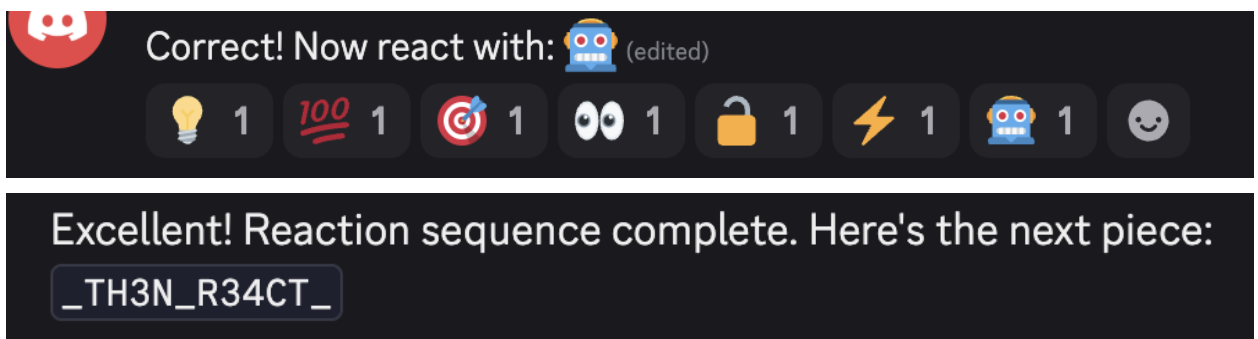

1. By looking at the UniVsThreats discord server member list, a suspicious “Floppy” bot could be spotted and DM’d.

2. First part of the flag is obtained by editing the “!helpme” command message, which is hinted by the reply (and the edit done by the bot 15 seconds later). You need to figure out a way to get the flag afterwards (i.e. by screenshotting) before it’s edited away.

3. The second part is obtained by reacting quickly enough in the !randomoji challenge, which can be done through a bot on a separate server you invite Floppy in.

See [solution.py](#) for more info

4. The bot rich presence status is actually just scrolling morse code, 1 character at a time every 5 seconds:

..- .---- - .---- -.. -.. -..- .---- .---- -.. .---- -..- .

By carefully observing and noticing the repeating pattern the third and final part can be obtained: F1N4LLY\_0B53RVE.

Hence, the flag is: UVT{F1R5T\_3D1T\_TH3N\_R34CT\_F1N4LLY\_0B53RVE}
